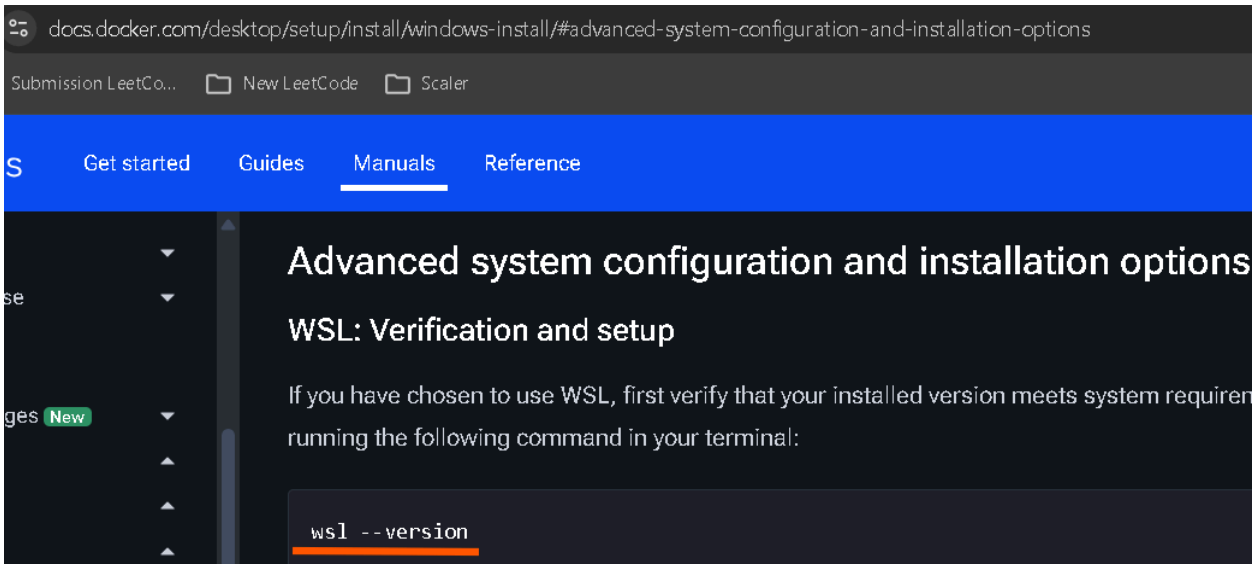
Install Docker:

Guide:

YouTube Video source: https://www.youtube.com/watch?v=5Mfe54238xE

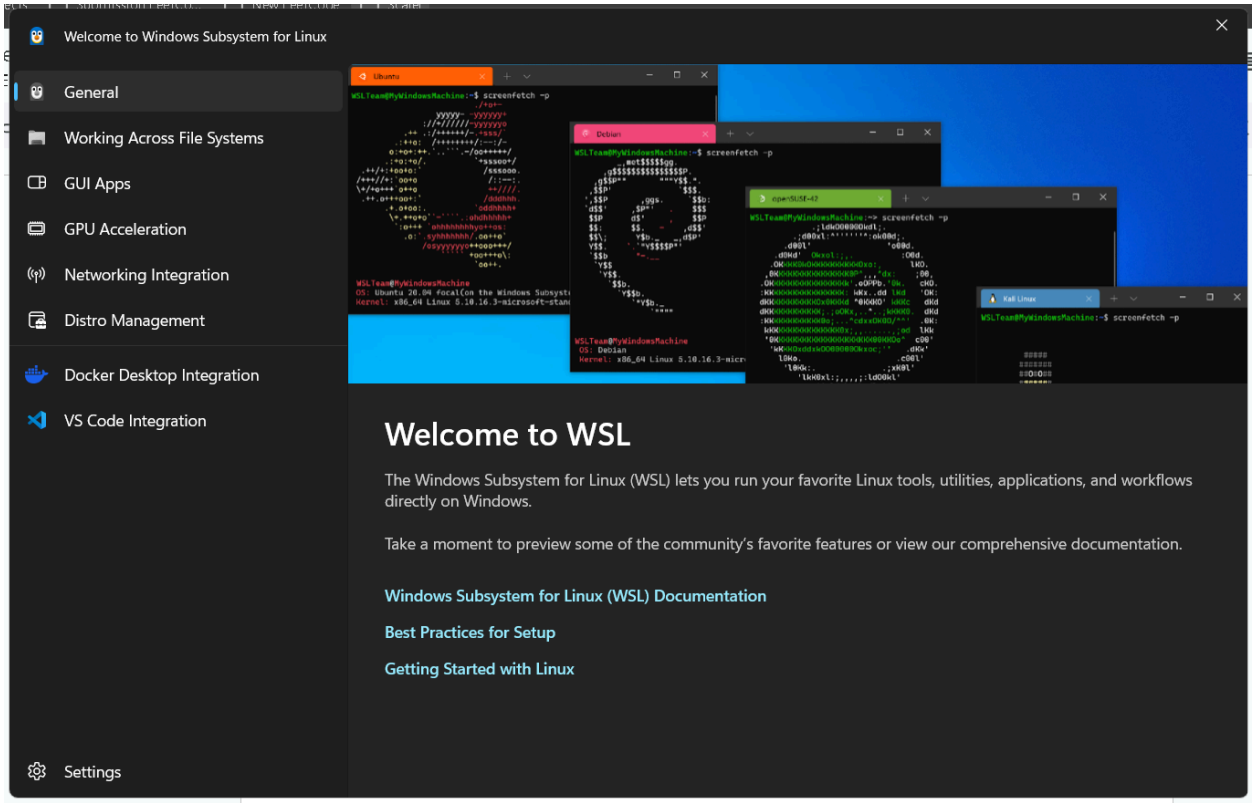
Visit the link:
https://docs.docker.com/desktop/setup/install/windows-install/#advanced-system-configuration-and-installation-options



Shows:

```
PS C:\WINDOWS\system32> wsl --install
Downloading: Windows Subsystem for Linux 2.6.3
Installing: Windows Subsystem for Linux 2.6.3
Windows Subsystem for Linux 2.6.3 has been installed.
The operation completed successfully.
Downloading: Ubuntu
Installing: Ubuntu
Distribution successfully installed. It can be launched via 'wsl.exe -d Ubuntu'
Launching Ubuntu...
Provisioning the new WSL instance Ubuntu
This might take a while...
Create a default Unix user account: kiran
```

Which also opens:



After clicking enter:

```
Create a default Unix user account: kiran
New password:
```

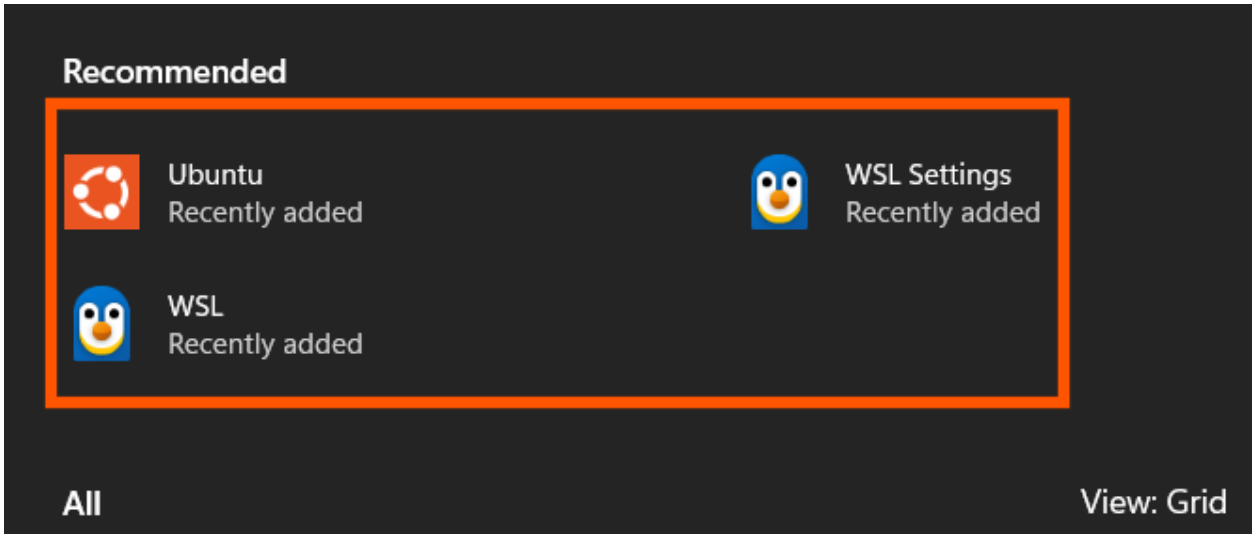
Provide password:

Then retype the password:

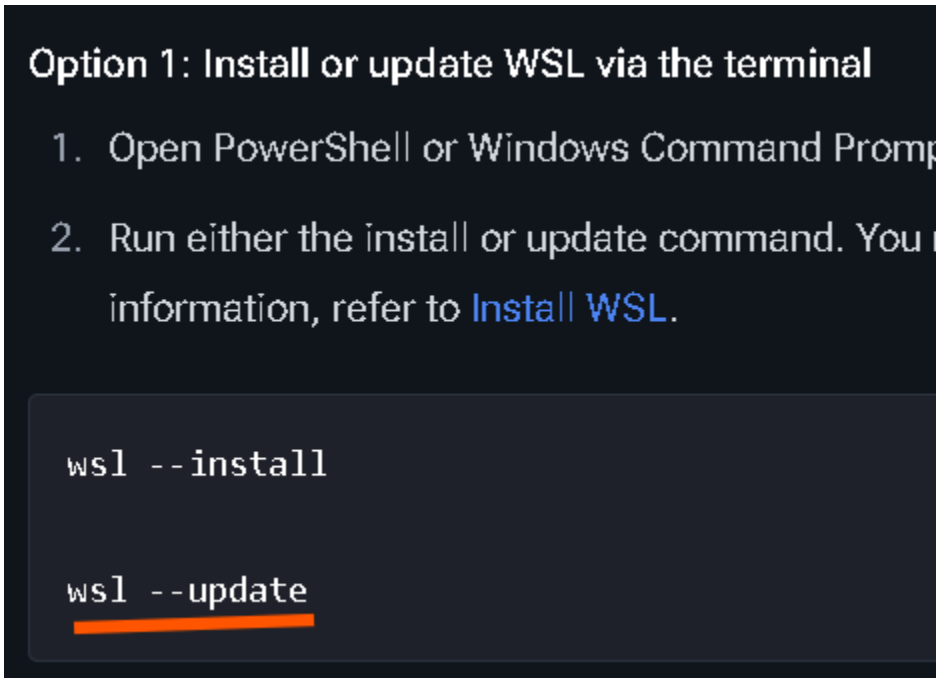
```
Create a default Unix user account: kiran
New password:
Retype new password:
passwd: password updated successfully
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

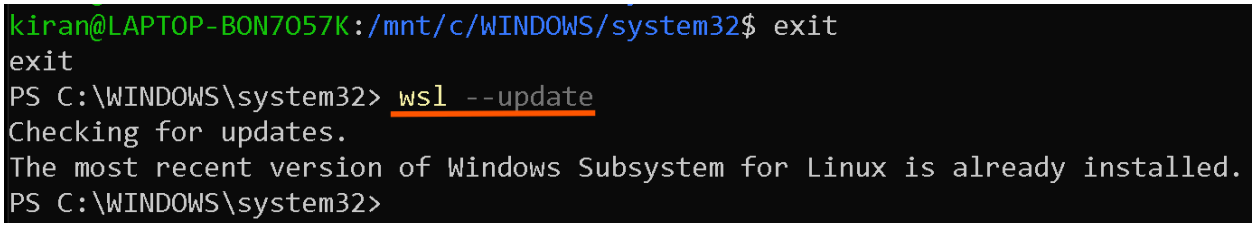
kiran@LAPTOP-BON7O57K:/mnt/c/WINDOWS/system32$
```

These will be installed in Laptop:



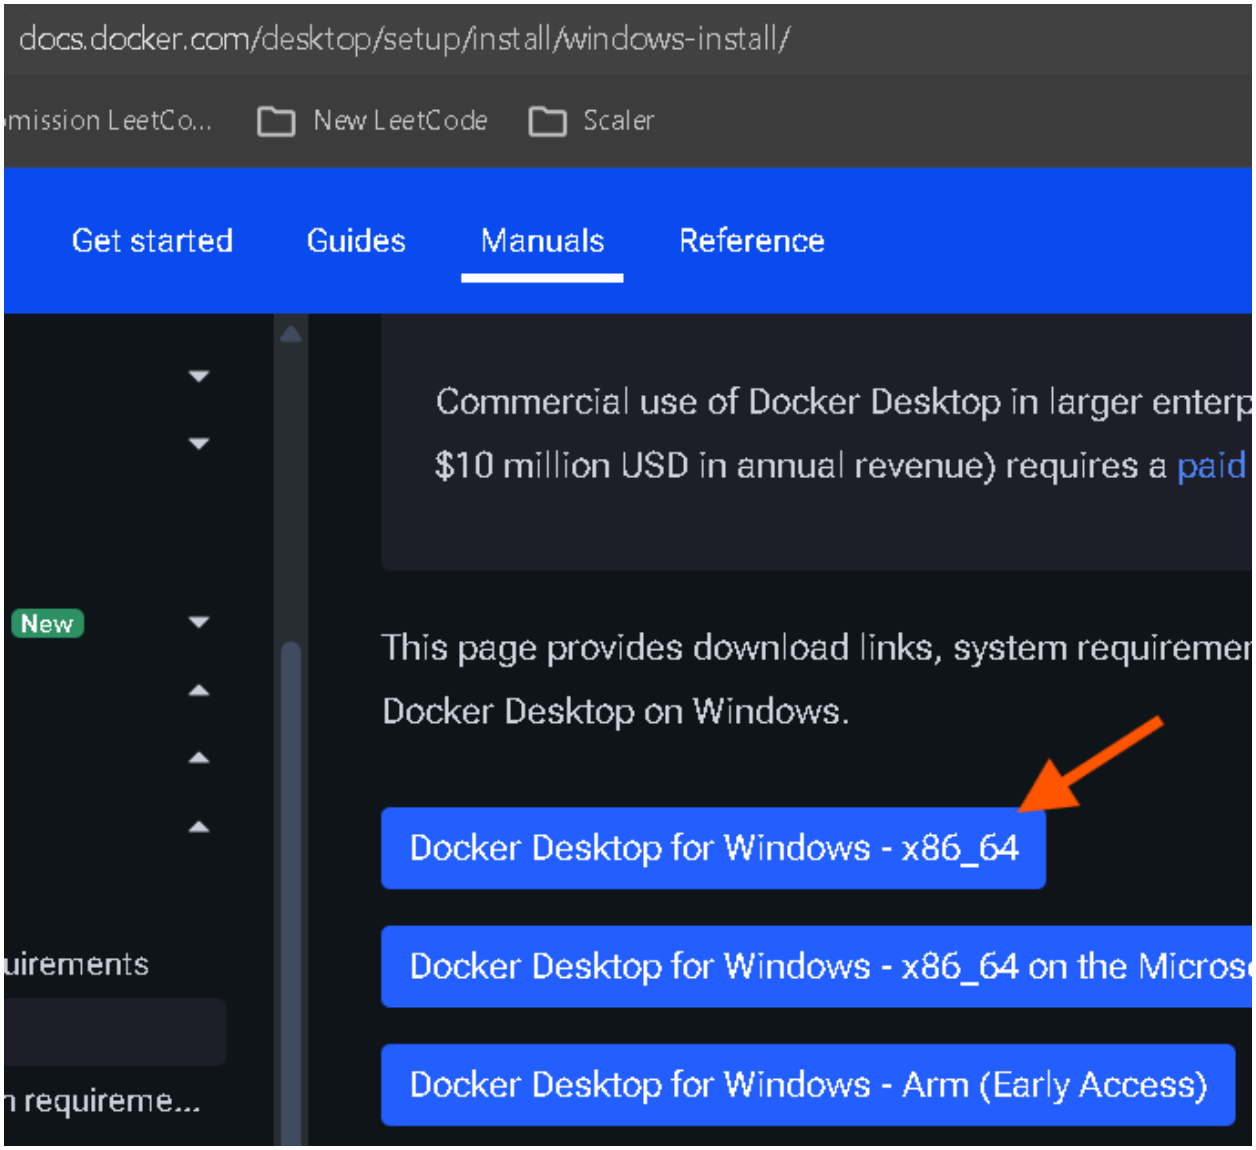
Next:

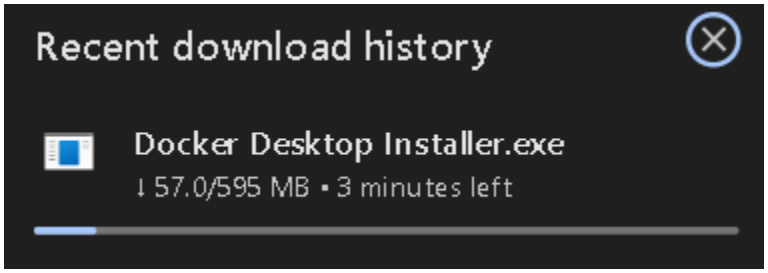




Download Docker for Windows:

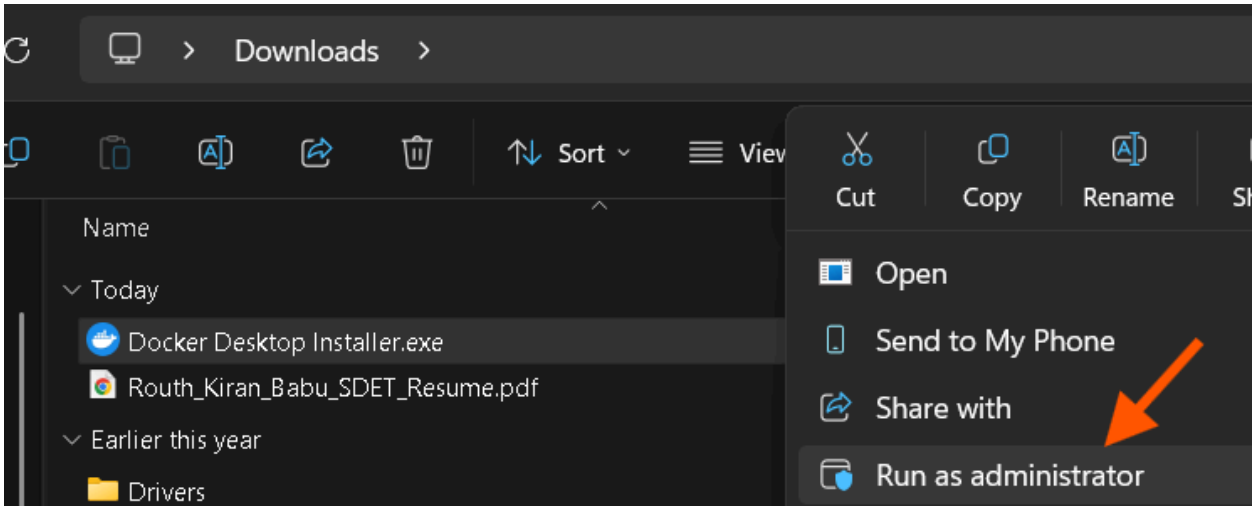
Visit: https://docs.docker.com/desktop/setup/install/windows-install/



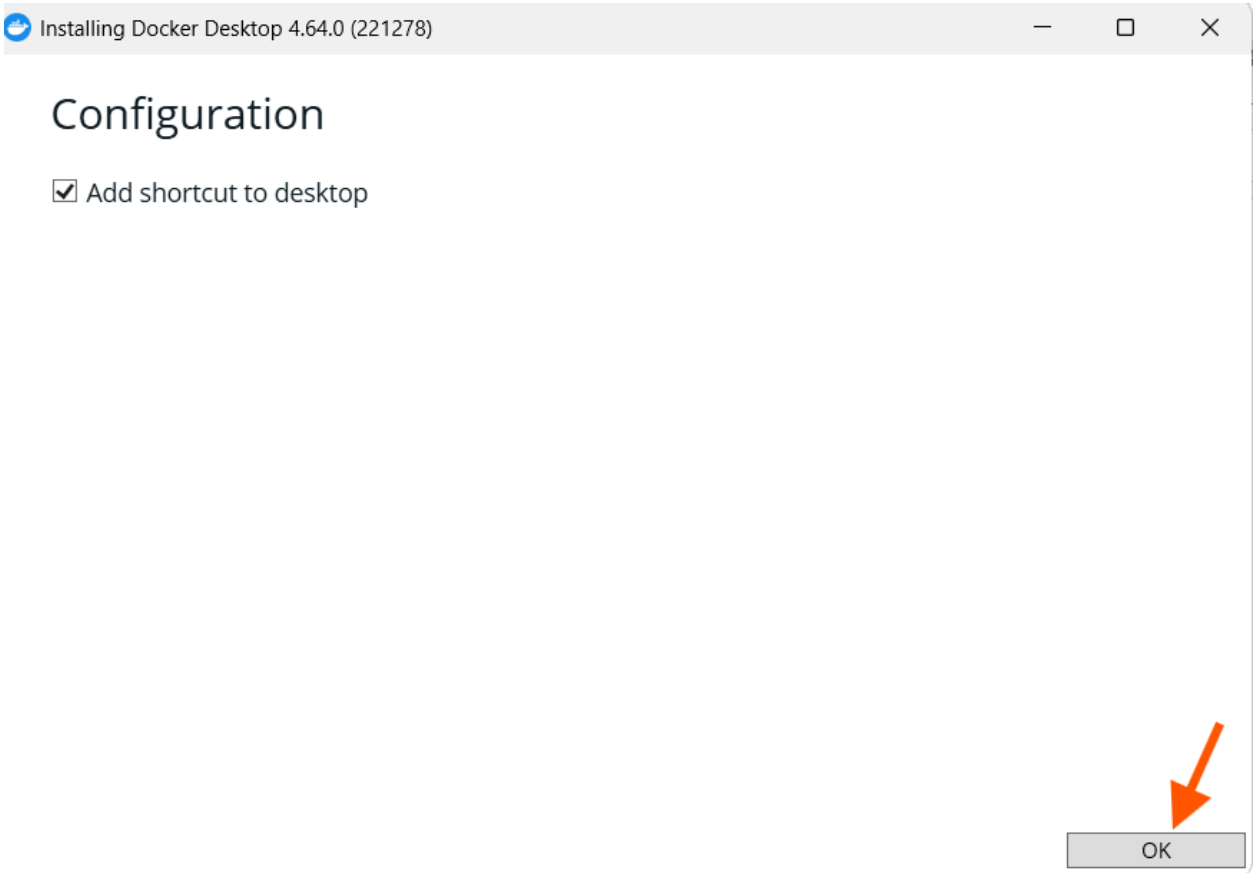


Note: don’t click on the exe file after download completes.

In the downloads folder run exe file as adminstrator:



Allow to changes into the device.



Installing Docker Desktop 4.64.0 (221278)

Docker Desktop 4.64.0

Unpacking files...

```

Status: Downloaded newer image for hello-world:latest

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
 $ docker run -it ubuntu bash
