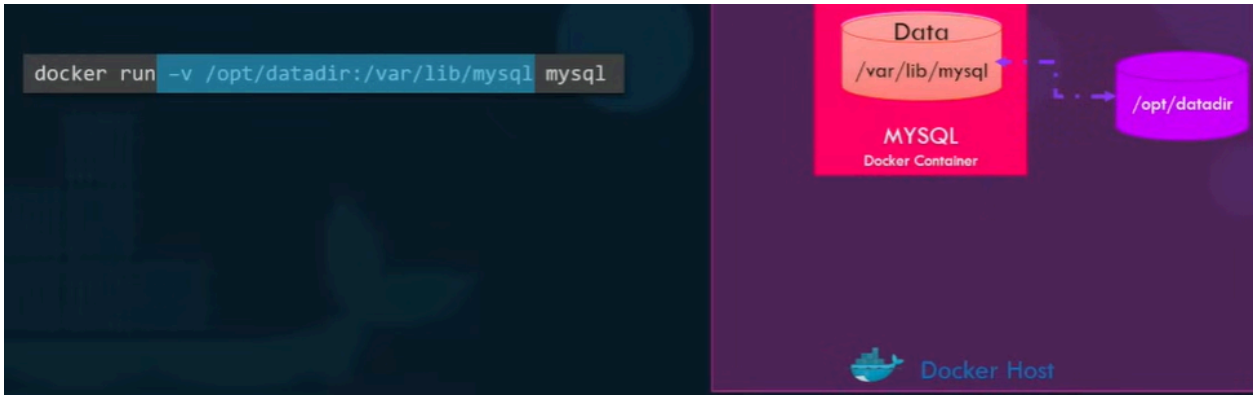
Volume Mapping:

To run the MySQL container:
Command: docker run mysql
Data is stored in **/var/lib/mysql** inside docker container.
If you want to remove the container, all the data within it get removed.
Use Command to delete: docker stop mysql
docker rm mysql

To map a directory outside a container, docker host and inside a container,



So that all the data will be stored in external volume like **/opt/datadir**. Thus, remains the data even if container gets deleted.

Inspect Containers:

To watch the details about the containers:
Command: **docker inspect CONTAINER_NAME OR ID**

```
C:\Users\kiran\OneDrive\Desktop>docker ps -a
