

After 15 minutes, we get this message from render.

Hi there!

We noticed your free web service, **mern-thinkboard**, recently spun down after 15 minutes of inactivity.

Here's why it happens: We run free services by letting them sleep when there's no traffic — allowing us to offer our powerful, scalable platform free for you to try. However, each time your service starts again, it can take up to a minute it to get back online.

Want fast load times 24/7? Upgrade to a **Starter** instance or higher. Here's what you'll get when you do:

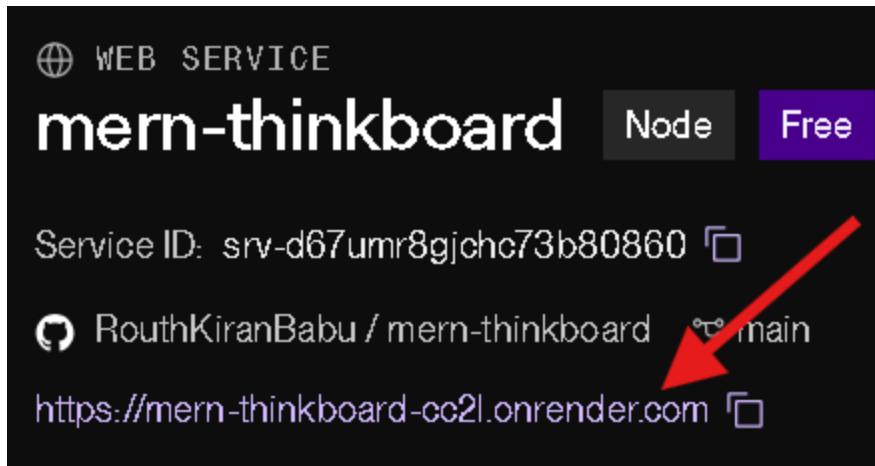

- **Always-On Availability:** No more waiting for spin-ups; your service is always live.
- **Detailed Metrics & Shell Access:** Track your performance in real time and troubleshoot easily.
- **Scaling:** Handle increased load without jeopardizing uptime.

Stay Online 24/7: Upgrade Now

Prefer to stay on a free instance? No problem — your app is still there and ready whenever you need it. If you have questions or want tips for building on Render, [**check out our docs.**](#)

To make it Re-Active:

Click on the link

If it actually inactive for 15 minutes: Click on it, and wait for to be **LIVE**.
